

Slash

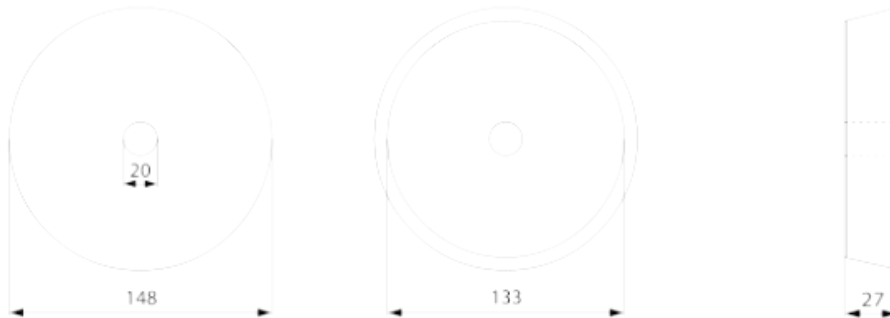

Selected mounting - for PDF file. Velcro

Selected colour - for PDF file.  Orange

Product description

NAT Slash DA series was created to work with Dual Action machines. Both shape and foam selection were selected due to detailing market's needs. All polishing pads created in these series have got hole with diameter of 19mm. While working with Dual Action machine problem is high temperature which comes from machine, then to mounting plate and at the end to polishing pad. 19 mm hole will ensure better ventilation. Second important aspect it to eliminate stacking polishing paste in the centre of polishing pad. Precise treatment and appropriate gradient angle of polishing pad give opportunity to move polishing pad close to the car elements without stopping rotation movement of machine.
