

TECHNICAL DATA SHEET

PERLA MARAVIGLIA ORO

(Gold Maraviglia Pearl)

Perla Maraviglia Oro is made of special pigments in the form of an extra fine powder.

When dispersed in the Metallic Hoblio Base of a decorative product, Perla Maraviglia Oro creates an intense, metallic and bright gold effect.

Proceed with great care when dispersing Perla Maraviglia Oro in powder form into the Metallic Hoblio Base that you want to pigment so as to prevent the formation of non dispersed powder clumps, which would make the colour non homogeneous.

Incorporate the pearl into the Metallic Hoblio Base, adding the powder a little at the time and stirring manually with a spatula; after that, stir the product mechanically using a dispersion drill at low speed, or, after closing the can, using the store stirrer until the pigments have been fully dispersed making the colour perfectly homogenous. Now the product is ready to be applied.
