

TECHNICAL DATA SHEET

074.DS

Additive/Thinner for arranging metallic particles during pouring - 074.DS

Description:

074.DS is a fixative for metallic and pearlescent paints, used to create a very thin layer in the area around the retouch.

Features and benefits:

- Removes Scotch Brite marks (light sanding of the surface before retouching or applying a new coat of paint) - smooths out these microscopic scratches to obtain an even shine without visible marks.
- Evens out aluminum flakes in the color shade
- Improves application flexibility by preventing the formation of dark halos during retouching when spraying is done with a gradual decrease in viscosity.

Method of use:

The product is ready to use.

Apply a thin layer around the retouched area.

The application of the metallized base coat should be done after 2-3 minutes.

Special instructions:

Storage: 24 months at a temperature between +5°C and +35°C
