

NEW IN THE WOOL FAÇADE SYSTEM – BEKATHERM PRESTIGE

Dear Sirs,

In January 2019 we have received an extension of the **ETA certificate for Bekatherm Prestige mineral wool façade system** which now includes two new items:

1. New **ETA certificate** shows it is possible to use **BK StirolFix WDVS** adhesive for fixing mineral wool boards.
 - 1.1. In addition to this product for fixing mineral wool boards we also recommend **ETA certified** products:
 - **BK StirolFix Special** (highly flexible adhesive for EPS, EPS G, XPS and MW boards and mesh reinforcement) and
 - **BK Stirolfix 1** (flexible adhesive for EPS, EPS G and MW boards and mesh reinforcement).
2. For the reinforcement of façade mash within the **Bekatherm Prestige** mineral wool façade system, the new **ETA certificate** shows that it is possible to use **BK StirolFix 1** product (flexible adhesive for EPS, EPS G and MW boards and mesh reinforcement) for mesh reinforcement.
 - 2.1. In addition to this product for mesh reinforcement, we also recommend the **ETA certified** product **BK StirolFix Special** (highly flexible adhesive for EPS, EPS G, XPS and MW boards and mesh reinforcement).

Your Bekament
